# Revised ListInterface

- Error handling
  - Methods return null or false if they do not complete
  - No exceptions thrown
- `getEntry()` and `removeEntry()` exist
  - `remove()` is replaced
- `getLength()` is now `size()`
- See summary in next slide
- Review `ListInterface.java`

# Revised ListInterface

boolean	<a href="#"><u>add</u></a> (int newPosition, <a href="#"><u>T</u></a> newEntry) Adds a new entry at a specified position within this list.
boolean	<a href="#"><u>add</u></a> ( <a href="#"><u>T</u></a> newEntry) Adds a new entry to the end of this list.
void	<a href="#"><u>clear</u></a> () Removes all entries from this list.
boolean	<a href="#"><u>contains</u></a> ( <a href="#"><u>T</u></a> anEntry) Sees whether this list contains a given entry.
<a href="#"><u>T</u></a>	<a href="#"><u>getEntry</u></a> (int givenPosition) Retrieves the entry at a given position in this list.
boolean	<a href="#"><u>isEmpty</u></a> () Determines whether the list is empty, or size() == 0
<a href="#"><u>T</u></a>	<a href="#"><u>remove</u></a> (int givenPosition) Removes the entry at a given position from this list.
boolean	<a href="#"><u>removeEntry</u></a> ( <a href="#"><u>T</u></a> anEntry) Removes the first or only occurrence of a specified entry from this sorted list.
<a href="#"><u>T</u></a>	<a href="#"><u>replace</u></a> (int givenPosition, <a href="#"><u>T</u></a> newEntry) Replaces the entry at a given position in this list.
int	<a href="#"><u>size</u></a> () Gets the size of this list.
<a href="#"><u>T</u></a> []	<a href="#"><u>toArray</u></a> () Retrieves all entries that are in this list in the order in which they occur in the list.

# Revised AList and LList implementations

- Use revised ListInterface
- Item positions are now zero offset (rather than 1)
- No CheckCapacity or CheckIntegrity for AList
- Use of public Node class for LList
  - but private within the implementation
- Use of isInRange() method to check to see if a position is in the list range
- Use of isFull() and hasRoom()
  - Needed for sorted lists
- Review the code for both

# DemoUtilities

- Creating a random list of integers for use in sorting
  - generateListOfNumbers
  - copyListOfNumbers – copies the list to another, using add() method
- Display a list
- All use ListInterface

# ListDemo

- Shows use of AList and LList
- Demonstrates use of various methods
- Uses DemoUtilities
